December 19, 1961

Dear Gene:

25X1A In order to do the O program justice we have decided to relieve [] of his other responsibilities to allow him to concentrate exclusively on it.

25X1A This has required a reorganization and the addition of new people. The two new key personnel involved are [] and 25X1A [] as shown on the attached chart.

25X1A [] had considerable to do with the design of the E-1 and E-2 cameras and, until now, has been in charge of E-6 camera design. 25X1A [] contributed significantly to the original O concept and has been used in a consultant capacity up until now. He is, therefore, more than cursorily familiar with your program. His knowledge of camera systems should be of immense value in the final design.

25X1A [] until now in charge of the design of ground equipment for E-6, also brings with him a wealth of background knowledge of equipment of the type we are interested in. He will be in charge of design (except cameras) fabrication, installation and maintenance of equipment.

We have expectations that these changes will not only reinforce our efforts for you on the O program, but will enhance our abilities to handle processing, reproduction and exploitation problems in order to keep up with the demands of the state-of-the-art of the Intelligence Community.

I hope that you will have an opportunity to meet with these new people in the near future.
